PROPOSAL FOR KING KHALID UNIVERSITY

Prepared for The Deanship of Student Affairs

Mastering AI for Graduate Employability and Entrepreneurship

Your graduating class, building with AI online, with support after the program.

What KKU has already seen

In September and October 2026, final-year KKU students used AI to build working apps in three days.

> *"Three days ago, I couldn't make a website. Today I'm creating my own."*
>
> Abdulaziz Abdullah Alshehri, physics

56	46	39	0
registered	completed Day 1	built and submitted an app	had built anything with AI before

Students from 11 disciplines, accounting to physics. All 39 projects, live: saifai.github.io/ai-readiness/kku

What we propose: three parts, online, for each cohort

1 Level 1 of the program

The program your students completed in person, now online for the graduating class.

THREE STEPS

01 **Learn to build.** A live online workshop: each student builds and publishes a web page with AI.

02 **Build a product.** An app from their field, a career need or a business idea, guided by our team.

03 **Show it.** An online Demo Day: students present their app as they would to an employer or a customer.

TWO OUTCOMES

Employability: a live app linked from their CV, and an interview-ready story about it.

Entrepreneurship: a working product, a method they can repeat, and the Keep Building Pack.

2 AI Global Leaders Summit

WHO SPEAKS

Founders and AI technical leads of companies with multi-million-dollar annual revenue: technology companies, and ordinary businesses that built AI into how they work and saw major results.

FORMAT

2	3 hours	3–4	Live
days, online	each day	speakers per session	Q&A

Each speaker covers what they built, its impact and the biggest opportunity for students, then takes questions.

Why it matters for KKU: students hear first-hand what employers and founders look for, from people with real track records.

3 Monthly Support Sessions

Support after the program ends, so students are not left on their own: **online, 90 minutes, once a month**, for the 3 months after each cohort finishes.

WHAT STUDENTS BRING

Practical questions from putting what they learned to use: a job interview they've had, a project they're working on or a business idea to test. They get direct, practical advice.

WHY IT MATTERS FOR KKU

Support continues after delivery, and students become confident and capable with what they built.

How it runs

DELIVERY	Online, with facilitators and assistants; an AI assistant handles routine questions. Every student is set up before day one. Once KKU agrees, we will suggest how best to run it for your students.
SCHEDULE	Proposed: first cohort in December 2026, then a new cohort every quarter, for KKU to agree.
KKU	Nominates the students and a coordinator. We run everything else.
TEAM	FLOW Management Consultancies. The team that ran the pilot, led by Sai Blackbyrn.

Investment

USD 280 per student

minimum 1,000 students per cohort

INCLUDED IN THE PRICE

Live online delivery, facilitators and assistants, the AI assistant, setup before day one, the online Demo Day, the Keep Building Pack, the AI Global Leaders Summit and three Monthly Support Sessions (90 minutes each).

Next step **Confirm student numbers and the December start date.**
